MEMORANDUM FOR: Chief, Manufacturing and Services Division, ORR

ATTENTION : [REDACTED] MS/CST

FROM : Chief, CIA/NPIC (NPIC)

SUBJECT : Ying-te Cement Plant, Communist China

REFERENCES : (1) ORR Requirement No. RR/114/63
(2) CIA/NPIC Project No. C 666/63

1. The referenced requirement concerns the cement plant which is under construction at Ying-te. A print of this plant is desired, in addition to information about the process to be employed.

2. In answer to the requirement an enlargement (CIA/PID/IB-P-465/63) of the cement plant, under construction north of Ying-te, is enclosed. This plant has the foundations for two rotary kilns in place. The cylinders piled south of the plant are the unassembled sections of a rotary kiln. The large shallow tank and the tanks with conical bases which are placed between the unassembled rotary kiln sections and the kiln foundations appear to be slurry tanks used in the wet process. The lack of activity in and around this plant probably indicates that construction has ceased.

3. The analysts on this project were Messrs. [REDACTED] who may be contacted on extension [REDACTED] should you have any further questions.

ENCLOSURE:
